

INTELLIGENT RISER

The Smart Building Foundation

Today, base building systems are highly vulnerable to cyberattacks and create technology headaches for property managers and engineers. The Intelligent Riser network is specifically designed to keep your building systems secure and running 24x7x365. Secure. Proven. Affordable.

ENTERPRISE-LEVEL SECURITY

Right now, over 250,000 building systems are wide open on the Internet with no password required. Hackers are exploiting these vulnerabilities and locking down the systems until money is paid. Intelligent Riser solves this problem with a cybersecure, monitored network dedicated to building systems.

A PROVEN NETWORK

Intelligent Riser is installed in hundreds of premier commercial buildings nationwide. We have a multi-decade, proven track record of designing and installing managed networks for base building systems in commercial high-rise office and multi-family buildings.

READY FOR ALL FUTURE SOLUTIONS

Intelligent Riser ensures that all future building solutions are connected, secured, and monitored to an enterprise-class standard, saving capex and opex through reduced cabling and equipment costs.

BEFORE

VULNERABLE

Building systems are open and vulnerable to a wide range of cyber-attacks.

NEGLECTED

Building system networks are set up and forgotten about...until there's a problem.

OUTDATED

After installation, most building systems are rarely updated, increasing security risk and liability over time.

AFTER

SECURE

Building systems run securely on the Intelligent Riser network, designed specifically for the building.

MONITORED

Our Network Operations Center (NOC) monitors the network 24x7x365, preventing intrusions and maximizing uptime.

MAINTAINED

Our certified network engineers ensure your Intelligent Riser network is always current with the latest security updates.
