

# FIRST STEPS TO A SMART BUILDING

**INTELLIGENT**  **riser**  
A DIVISION OF MONTGOMERY TECHNOLOGIES

# START WITH THE FOUNDATION: THE BUILDING NETWORK

For over ten years, we've worked with hundreds of CRE buildings large and small, so we understand the options you need to help get it done.

1

Schedule a network assessment to understand what you have

-OR-

Use an already-budgeted capital project to install a network that can be used to secure other systems

-OR-

Install an affordable, cybersecure "head-end" and connect the nearby systems

2

Install the Intelligent Riser cybersecure network

-OR-

Migrate the most vulnerable systems to a "Phase 1" Intelligent Riser cybersecure network

-THEN-

Migrate additional systems onto the Intelligent Riser over time, as budget allows

3

Intelligent Riser provides ongoing cybersecurity, monitoring, and maintenance and is the single-point-of-contact to handle moves, adds, and changes to a secure building standard

You now have a Smart Building foundation - enterprise-class, redundant network infrastructure enabling building systems to communicate securely and reliably, 24x7x365.
